

JOSÉ IGNACIO ESTEBAN GONZÁLEZ

Data Engineer & Data Scientist

Madrid, España | nachoestebang@gmail.com | Open to Relocation (EU/USA)

PROFESSIONAL PROFILE

Data Engineer with 3+ years of experience designing and optimizing data systems in production environments. Combines strong software engineering foundations with specialization in distributed data architectures (Apache Spark/PySpark), ETL pipelines, and applied machine learning. AWS Certified.

WORK EXPERIENCE

Data Engineer & Software Engineer | QubiQ, Madrid

Jun 2022 – Present

- Designed and implemented ETL/data pipelines for external system integration, ensuring data traceability and quality in production.
- Optimized PostgreSQL schemas: reduced query time in critical processes through indexing and complex query refactoring.
- Developed Python/SQL business logic modules on large transactional datasets, improving system scalability.
- Automated internal data workflows, reducing manual intervention in repetitive processes.
- Mentored interns: code reviews and guidance on data analysis projects.

Adjunct Professor — Master's in Industrialized Construction | Universidad de Nebrija, Madrid

2026 – Present

- Deliver lectures on data management, analytics, and Big Data methodologies applied to industrialized construction, presenting real-world scenarios and data-driven decision-making in the AEC industry.

EDUCATION

M.S. Big Data Science (In Progress)

2025–2026

Universidad de Navarra

M.S. Artificial Intelligence & Innovation

2024–2025

Founderz

B.S. Data Science

2022–2025

Universidad de Carlemany

Data Science Bootcamp

2022

The Bridge

Telecommunications Engineering (partial)

2017–2022

Universidad Politécnica de Madrid

RESEARCH PROJECTS

- HVAC Energy Optimization [TFM – In Progress]** (*XGBoost · Time Series · IoT*): Predictive models on real-time IoT data for intelligent HVAC adjustment with measurable energy efficiency impact.
- Football Training Load Optimization [TFM]** (*Random Forest · Neural Networks*): Injury risk prediction system and physical load adjustment for high-performance athletes.
- Cardiovascular Disease Prediction [TFG]** (*Scikit-learn · EDA · Clinical Data*): Automated risk pattern identification on open clinical datasets with high diagnostic accuracy.
- U.S. Housing Price Predictor [Bootcamp – The Bridge]** (*Regression · Scikit-learn · GeoPandas · Python*): End-to-end model to predict residential property prices across the U.S. based on location, square footage, number of bedrooms/bathrooms, and other structural features.

TECHNICAL SKILLS

Big Data & Cloud: AWS (Certified), Apache Spark, PySpark, ETL/ELT Pipelines, Docker, Git

Data Science & ML: Python (Expert), XGBoost, Scikit-learn, Feature Engineering, Time Series, Pandas, NumPy

Databases: SQL, PostgreSQL, Data Modeling, Query Optimization

Certifications: AWS Cloud Practitioner · ML with PySpark (DataCamp) · Data Science for Healthcare (MIT) · DB Design (U. Michigan)

LANGUAGES

- Spanish — Native
- English — B2 (Working Professional)
